Capstone Reflection

The overall course helped me through my job applications. It made me show what I can do and present it digitally and professionally. It eventually helped me land an internship for this summer. I rediscovered my HTML skills from this class so I made an HTML resume with it. I used both of my HTML resume and online portfolio in my job applications my final Capstone project I'm thinking of making a live air traffic radar/chart for Little Rock. I found some good and free APIs to piggyback off. It will feature a live chart of aircraft coming in or out of Clinton National Airport complete with GPS location. It will also feature flight origin and destination as well as ETA. The problem I found so far was making my project analysis and chart. Mostly because I'm not sure what to put in there. I am also indecisive and it's hard for me to draft even a few examples. I still need to relearn more Java and research to make my final idea. Since I'm doing this project by myself, there could be an issue of getting overwhelmed but for now I'm confident. I learned a lot from Capstone 1 that will help me in Capstone 2. I really appreciate splitting Capstone into two parts to not overwhelm students. I'm looking forward to finishing this so I can graduate by fall.
